Error Report 1509

Error Report 1509 notes that the RAI indicator of an RA transaction is not being checked when the DOS value is CMP. The result is that the Comp Time Balance (EBB 5110) is being reduced even when the RAI indicator value is ‘A’, indicating that the hours balance should not be reduced.

Programs

PPGRSPAR

Code has been added to determine that the PAR adjustment indicator for the CMP DOS is spaces before subtracting the hours earned from the current comp time hours.

Installation Instructions

Installation of this program requires the following steps.

1. Modify, compile, and link program PPGRSPAR into the batch loadlib (LOADLIB).
2. Execute and verify the test.

3. Perform any desired additional campus testing.

4. Install the program in production.

**Test Plan**
Run a payroll compute using two RA transactions with a DOS value of ‘CMP’ for two different employees. The employees should each have the same amount of comp time (COMP_TIME_BAL in PPPEAR (EDB 5110)). The RA transactions should be the same except that one should have an RAI value of ‘A’, indicating that the comp time balance should be decremented, and the other should have an RAI value of blank, indicating that the comp time balance should not be decremented.

The comp time balance for the employee whose RAI value is ‘A’ should not change. The comp time balance for the employee whose RAI value is blank should be minus the number of hours in the RA transaction. For the example, if the number of hours in the RA transaction were -10, that would be - (-10) hours, resulting in 10 hours added to the current comp time balance.

**Timing of Installation**

The installation of this release is Not Urgent.

As usual, campuses are encouraged to install this release in as timely a fashion as possible, and in the normal numeric sequence of releases.

If there are any questions, please send electronic mail to Madelyn.Sano@ucop.edu, or call at (510) 987-0465.
