Introduction

This document provides installation instructions for release 1389. Please review these instructions carefully before proceeding with the installation.
Installation Sequence

1. CICS Map Generation:
   a) Install the source code member listed in the following table:
   b) Use SDF II option 6 to generate the BMS macro and the COBOL data structure.
   c) Assemble the BMS macros to produce the physical map description used by CICS/BMS.

<td></td>
<td></td>
</tr>
</tbody>
</table>

2. COBOL Program Installation

   At UCOP, all COBOL programs pass through the DB2 pre-compiler, whether or not the program contains embedded SQL, to resolve INCLUDE references. Your site may have different requirements.

   Note: "DUAL" programs must be compiled twice and linked into batch and online libraries ("LOADLIB" and "OLOADLIB" respectively). "CICS" programs must be CICS pre-compiled and compiled once and linked into OLOADLIB. "BATCH" programs must be compiled once and linked into the batch LOADLIB only.

   a) Modify, install, compile and link the modified programs listed in the following table.

</tr>
</tbody>
</table>

3. CICS HELP

   a) Import revised CICS HELP anchor data from PAYDIST.R1389.HELPANCH (refer to sample JCL in PAYDIST.R1389.JCL(LOADANCH)).

4. Execute and verify the rest of the test plan, per supplied instructions.

5. Perform any desired additional campus testing.

6. Place modified objects in production.
