Urgency: Urgent (See Timing of Installation)

This release addresses the following Error Report:

**Error Report 1778**

It has been reported from Berkeley, and confirmed at UCOP, that a new PIE Date (EDB 0751) is established when a non-rehired employee's BELI is changed from a value of ‘3’ to ‘2’. A PIE Date should not be established when the BELI (EDB 0360) is changed from a ‘3’ to ‘2’.

In addition, after further research and testing at UCOP, it has been found that when the BELI is changed from a ‘3’ to ‘2’ for an non-rehired employee who has a Medical Coverage End Date that is prior to the new BELI Effective Date (EDB 0341), a new PIE Date is established and the employee is enrolled in the default medical plan code of 'DM'. A PIE Date should not be established, and the employee should not be enrolled in the default 'DM' medical plan when the BELI is changed from a BELI value of ‘3’ to ‘2’.

**Programs**

**PPEC102**

PPEC102 has been modified to **not** enroll the employee into the default medical plan of ‘DM’ when the medical coverage is not active, and the BELI (EDB0360) is changed from a value of ‘3’ to ‘2’.

**PPEI204**
PPEI204 has been modified to not establish a new PIE Date when the BELI is changed from a value of ‘3’ to ‘2’.

**Test Plan**

At UCOP before and after tests were performed via the EINS screen of the on-line environment. An employee with an existing **BELI (EDB 0360) value of ‘3’** was selected for the test. Campuses can replicate the following test cases. The expected results are as follows:

- **Modified versions of PPEC102 and PPEI204**

  When the employee’s medical plan coverage is active (No Medical Coverage End Date, or Medical Coverage End Date is later than BELI Effective Date), and the BELI (EDB 0360) is changed from a value of ‘3’ to ‘2’, a new PIE Date (EDB 0751) is **not** established.

  When the employee’s medical plan coverage is not active (Medical Coverage End Date (EDB 0300) is prior to the new BELI Effective Date (EDB 0341), and the BELI is changed from a value of ‘3’ to ‘2’, a new PIE Date (EDB 0751) is not established. In addition, the employee is **not** enrolled into the default plan of ‘DM’.

- **Unmodified versions of PPEC102 and PPEI204**

  When the employee’s medical plan coverage is active (No Medical Coverage End Date, or Medical Coverage End Date is later than BELI Effective Date), and the BELI (EDB 0360) is changed from a value of ‘3’ to ‘2’, a new PIE Date (EDB 0751) is established.

  When the employee’s medical plan coverage is not active (Medical Coverage End Date (EDB 0300) is prior to the new BELI Effective Date (EDB 0341), and the BELI is changed from a value of ‘3’ to ‘2’, a new PIE Date (EDB 0751) is established. In addition, the employee is enrolled into the default plan of ‘DM’.

**Installation Instructions**

1. Install the modified COBOL sources for PPEC102 and PPEI204.
2. DB2 pre-compile, compile and link Dual programs PPEC102 and PPEI204 into **batch LOADLIB** and **on-line OLOADLIB**.
3. Bind package for PPEI204.

**Timing of Installation**

The installation of this release is Urgent.

If Release 1386 has not yet been installed, then this release should be installed together with Release 1386. If Release 1386 has already been installed, then installation of this release is Urgent in order to avoid the reported problem.

As usual, campuses are encouraged to install this release in as timely a fashion as possible and in the normal numeric sequence.

If there are any questions, please send electronic mail to Jackson.Quan@ucop.edu, or call at (510) 987-0464.
