Introduction

This document provides installation instructions for release 1407. Please review these instructions carefully before proceeding with the installation.
Installation Sequence

1. COBOL Program Installation

At UCOP, all COBOL programs pass through the DB2 pre-compiler, whether or not the program contains embedded SQL, to resolve INCLUDE references. Your site may have different requirements.

Note: "DUAL" programs must be compiled twice and linked into batch and online libraries ("LOADLIB" and "OLOADLIB" respectively). "CICS" programs must be CICS pre-compiled and compiled once and linked into OLOADLIB. "BATCH" programs must be compiled once and linked into the batch LOADLIB only.

a) Modify, install, compile and link the modified programs listed in the following table.

3. CICS HELP

a) Import revised and new CICS HELP screen data from PAYDIST.R1407.HELPSCRN (Refer to sample JCL in PAYDIST.R1400.JCL(LOADSCRN))

4. Execute and verify the rest of the test plan provided in Release 1400, per supplied instructions.

No test data are provided in this release. Campuses should use the test data already provided in Release 1400.
It is noted that existing datasets PAYDIST.R1400.RCSTORE and PAYDIST.R1400.UDB2CTL have been updated to contain EIC related values in System Parameter Entries 87, 88, and 89, and Surepay Statement Privacy related values in System Parameter Entries 27, 28, and 29. Campuses should obtain the current data in these two datasets prior to starting the test.

5. Perform any desired additional campus testing.

6. Install Control Table (CTL) updates into production.

   • System Parameters Table

     **System Parameter Entries 87, 88, and 89**

     Use the transactions in PAYDIST.R1407.CARDLIB(PRMPROD), or key from the provided facsimiles UPAY559 form. These transactions may be used both for testing and production, with the approval of your campus Payroll Manager.

     **System Parameter Entries 27, 28, and 29**

     For those campuses who have already installed Release 1400 into production, local update system parameter transactions for **Release 1246** must be re-applied to the VSAM System Parameters Table.

     Update the DB2 production tables by executing program PPP851 for Table 01.

7. Place modified objects in production.
