Installation Instructions

This document provides installation instructions for this release. Review these instructions carefully before proceeding with installation.

Program Preparation

Note: At UCOP, all COBOL programs pass through the DB2 pre-compiler, whether or not the program contains embedded SQL, to resolve INCLUDE references. Your site may have different requirements.

Note: "DUAL" programs must be compiled twice and linked into batch and online libraries ("LOADLIB" and "OLOADLIB" respectively). "CICS" programs must be CICS pre-compiled and compiled once and linked into OLOADLIB. "BATCH" programs must be compiled once and linked into the batch LOADLIB only.

1. Install, compile and link the modified programs listed in the following table.

<table>
<thead>
<tr>
<th>Program</th>
<th>DB2?</th>
<th>Compile</th>
<th>Package Bind?</th>
<th>Done?</th>
</tr>
</thead>
<tbody>
<tr>
<td>PPP520</td>
<td>Yes</td>
<td>BATCH</td>
<td>No</td>
<td></td>
</tr>
<tr>
<td>PPP530*</td>
<td>Yes</td>
<td>BATCH</td>
<td>No</td>
<td></td>
</tr>
</tbody>
</table>

* Be careful to retain local FAU functions when implementing the release changes.

Plan Binds

1. Bind the plans in the following table.

<table>
<thead>
<tr>
<th>Bind Member</th>
<th>Done?</th>
</tr>
</thead>
<tbody>
<tr>
<td>PPP520</td>
<td></td>
</tr>
<tr>
<td>PPP530</td>
<td></td>
</tr>
</tbody>
</table>
Testing

Perform installation verification testing as described in the Test Plan.

Install in Production

1. Install Control Table (CTL) updates into production.

Execute PPP854 to split the transactions supplied in the following release CARDLIB files into separate VSAM and DB2 Transaction Files for processing in PPP010 (DD CTVSAMO) and PPP004 (DD CTLDB2O) to update the production System Parameter Table and System Message Table (DES). The release JCL (RUN854) provided from Release 1401 can be used as an example. Note that as of Release 1401, PPP851 updates only those DB2 Control Tables currently not defined on the PPPTOT Table.

- PRMPROD

Use the transactions in CARDLIB (PRMPROD), or key from the provided facsimile UPAY559 form. This transaction will update System Parameter 162 (previously unassigned) which will direct whether or not benefits associated with the default FAU process should receive “staff” offset relief. The “?” associated with transaction column 12 must be set to the local desired value (i.e., either zero or non-zero). When System Parameter 162 is zero, the benefits will continue to be offset as per normal funding eligibility (see Fund Group Table, Grouping Definition “BNOFFSET”). Otherwise (System Parameter 162 is non-zero; e.g., set to one), the departmental offset relief for the medical, dental, or vision benefits will be prevented for these default FAU assigned entries.

- MSGPROD

Use the transactions in CARDLIB (MSGPROD), or key from the provided facsimile UPAY554 form. These transactions should be used both for testing and production.
