This release addresses the following Error Report:

**Error Report 1948 - Incorrect date in PPP6402 report header**

It was reported in error report 1948 that the date in the PPP6402 (ERRORS AND WARNING MESSAGES) report header is incorrect after the first page. Program PPP640 has been modified to correct this problem.

**Program**

PPP640
This program generates the monthly time benefits roster and liability leave reports. Previously, the program formatted the current date into a work field and then moved the work field into the report header at the top of each page. After generating the header for the first page, the work field was populated with other data so that subsequent pages did not have the current date. The program has been changed to use a different work field for the report header so that it doesn’t get overlaid with other dates.

**Test Plan**

1. Run job LOADEDDB provided with the release to load the EDB database for testing
2. Run program PPP640 using the JCL member RUN640 that is provided with this release.
3. Verify that the same (current) date displayed on *each page* of report PPP6402. A sample report is provided in the REPORTS PDS provided with this release.
