     Urgency: Not Urgent

This release addresses the following Error Report:

**Error Report 2147**

Error Report 2147 states that there are many un-referenced objects in base PPS which should be made obsolete.

This is an entirely technical release which makes unused objects obsolete. In all cases, the objects should have been made obsolete when the last reference to them was removed from the programs, but this step was omitted from previous release material.

A complete list of objects being made obsolete is in the Installation Instructions document.

**Installation Instructions**

A separate Installation Instructions document is provided for this release.

**Test Plan**

Since no programs are being modified or compiled for this release, no testing is required.

Base COBOL and web source code have been searched for any references to these objects and none were found. It is recommended that campuses repeat this exercise with their source code to confirm that the objects are not being referenced by local code.

**Timing of Installation**

The timing of this release is **not urgent**. As usual, campuses are encouraged to install this release in as timely a fashion as possible and in the normal numeric sequence.

If there are any questions, please send electronic mail to Maxine.Gerber@ucop.edu, or call 510-987-0422.
