University of California
This document provides installation instructions for release 2138. Please review these instructions carefully before proceeding with the installation.

1. **COBOL Program Preparation**

At UCOP, all COBOL programs pass through the DB2 pre-compiler, whether or not the program contains embedded SQL, to resolve INCLUDE references. Your site may have different requirements.

"DUAL" programs must be compiled twice and linked into batch and online libraries ("LOADLIB" and "OLOADLIB" respectively). "CICS" programs must be CICS pre-compiled and compiled once and linked into OLOADLIB. "BATCH" programs must be compiled once and linked into the batch LOADLIB only.

1.1 Compile and link the following **new one-time** program:

<table>
<thead>
<tr>
<th>PROGRAM</th>
<th>DB2?</th>
<th>Compile Type</th>
<th>Package Bind?</th>
<th>Done?</th>
</tr>
</thead>
<tbody>
<tr>
<td>PPOT2138</td>
<td>Yes</td>
<td>Batch</td>
<td>No</td>
<td></td>
</tr>
</tbody>
</table>

2. **JCL Changes**

2.1 Create JCL for the one-time program. The test JCL can be used as a model to create the production JCL.

<table>
<thead>
<tr>
<th>Program</th>
<th>Sample JCL</th>
<th>Installed?</th>
</tr>
</thead>
<tbody>
<tr>
<td>PPOT2138</td>
<td>RUNO2138</td>
<td></td>
</tr>
</tbody>
</table>

3. **Testing**

3.1 Perform installation verification testing as described in the Release Letter. In addition, perform any further local testing.

3.2 Place modified objects in Production.

3.3 Run PPOT2138 and produce the tab-delimited files using the PAR data base tables (DB2).

3.4 Use the FT transaction files from program PPOT2138 as input to the compute.

3.5 Use the tab delimited and costing files from PPOT2138 for local reporting.
